REGISTRA

USER MANUAL

Version	2.3 - 2026
Language	English
Publisher	PEREL
Contact	perel.editor@gmail.com

© 2026 PEREL – Published under GPL v3+

1. Module Overview

Registra is a Dolibarr module published by PEREL. It handles both free and paid events, supporting individual registrations, company sign-ups, and add-on purchase options.

1.1 Overall Workflow

From event creation through attendance tracking, Registra automates the entire registration process.

1.2 Key Features

- Event creation and configuration: title, date, location, capacity, and pricing
- Public registration form — no Dolibarr account required, unique link per event
- Individual registrations and company registrations
- Multiple participants per registration with badge management
- Automatic matching to existing Dolibarr records — no duplicates
- Standard Dolibarr invoicing for paid events
- Per-event purchase options: services, meals, accommodation, accessories...
- Promotional codes per option with discounted pricing
- Attendance tracking and KPI dashboard
- Excel exports: participants, question responses, labels / badges

1.3 What's New in Version 2.0

Version 2.0 of Registra introduces several major features:

- Multiple purchase options per participant (meals, accommodation, VIP access...)
- Promotional codes per option with discounted pricing
- Real-time total recalculation during registration
- Multi-participant registrations with individual option selection per participant
- Redesigned public registration workflow in 4 or 5 guided steps

1.3.1 What's New in Version 2.1

Version 2.1 of Registra introduces the following enhancement:

- The ability to select the bank account to be used for invoices and payments directly from the event configuration page.

1.3.2 What's New in Version 2.2

Version 2.2 of Registra introduces the following enhancement:

- Dynamic display of the Promotional Code section: the promo code field is now displayed only when at least one promotional code is configured for the event.

1.3.3 What's New in Version 2.3

Version 2.3 of Registra introduces the following enhancement:

- Dy When a third party is automatically created for an individual registration, Registra now explicitly identifies it as a "Private Individual" when this type is available in Dolibarr. This enhancement improves compatibility with modules and compliance controls that rely on the distinction between private individuals (B2C) and organizations (B2B).

1.4 Requirements

Item	Detail
Dolibarr	17.0 or higher
Required rights	read / write / delete on the Registra module
Technical user	registra_system (to be created from the module settings)
Payment module	Optional — Registra uses whichever payment modules are already installed

1.5 Installation

1. Download the module ZIP from Dolistore.
2. In Dolibarr: Configuration → Modules/Applications → Deploy an external module.
3. Upload the ZIP file, then enable Registra in the module list.
4. Open the module Settings and configure the technical user.

 On first activation, click **“Create / select the recommended technical user”** in the settings. This user is essential for public forms to create registrations, third-party records, and invoices in Dolibarr.

2. Configuration

2.1 General Settings

Setting	Description
Technical user	Account used by public forms to create registrations, third-party records, and invoices. Select or create registra_system.
Base public URL	Optional. Fill this in only if the external URL of the form differs from the internal Dolibarr URL (proxy, reverse proxy).

2.2 User Rights

- registra/read — read access to the event list and event records
- registra/write — create and edit events
- registra/delete — delete events that have no participants

2.3 Technical User

In the module settings, the automatic creation button is labeled **"Create / select the recommended technical user"**. It creates the registra_system user if it does not already exist, or reuses the existing account with the same name, then automatically grants it the required rights.

 **"Registra rights not registered" message** — if the screen displays a message stating that Registra rights are not registered in Dolibarr, this means the module has not completed its activation process. Disable then re-enable the Registra module (Configuration → Modules/Applications), then retry creating the technical user.

 **Selecting an existing user who is already an administrator** — no additional rights are granted in this case: a Dolibarr administrator already has all the necessary access. It is normal if nothing appears to happen after the selection.

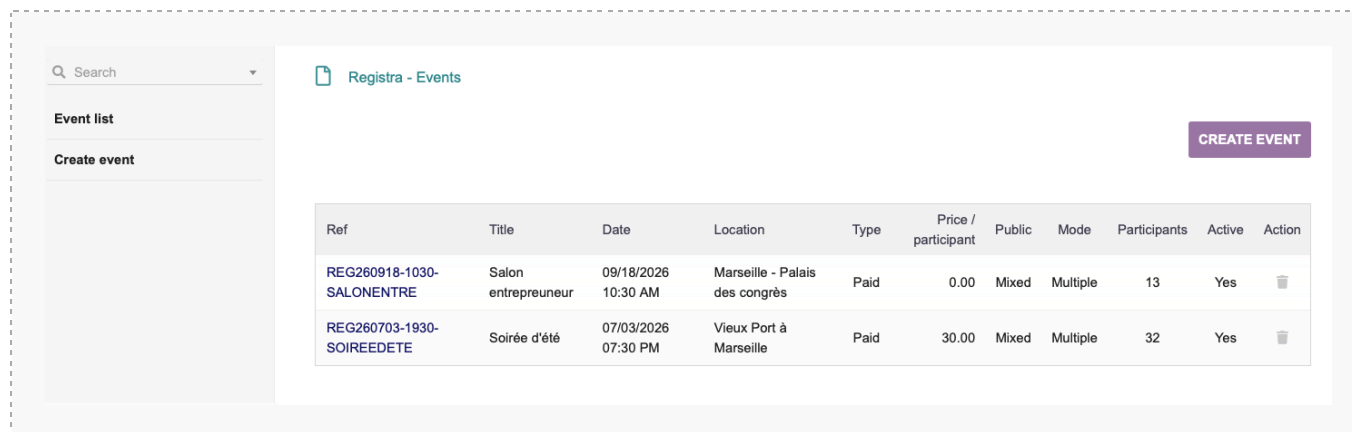

The rights automatically granted to the technical user are detailed directly on the settings screen, in the "Recommended rights for the technical user" box:

- read/create/edit third-party records
- read/create contacts
- create/validate customer invoices

3. Creating and Managing an Event

3.1 Event List

Registra menu → Event list. Click CREATE AN EVENT to add a new event.

The screenshot shows the 'Registra - Events' interface. On the left is a sidebar with a search bar, 'Event list', and 'Create event' options. The main area displays a table of events with columns: Ref, Title, Date, Location, Type, Price / participant, Public, Mode, Participants, Active, and Action. Two events are listed: 'Salon entrepreneur' and 'Soirée d'été'. A 'CREATE EVENT' button is in the top right corner.

Ref	Title	Date	Location	Type	Price / participant	Public	Mode	Participants	Active	Action
REG260918-1030-SALONENTRE	Salon entrepreneur	09/18/2026 10:30 AM	Marseille - Palais des congrès	Paid	0.00	Mixed	Multiple	13	Yes	
REG260703-1930-SOIREEDETE	Soirée d'été	07/03/2026 07:30 PM	Vieux Port à Marseille	Paid	30.00	Mixed	Multiple	32	Yes	

3.2 Configuring the Event

Click CREATE AN EVENT to open the configuration form.

 Create eventStatut ☒ Active / registrations open Event informationTitle Date 06/09/2026  16  52  NowLocation Capacity (optional) Empty = unlimited. Capacity counts all registered participants: paid, pending, free and guests.

SAVE

Event Status

Status	Description
Active / registrations open	Public registrations are allowed.
Inactive	Public registrations are blocked.

 When an event is inactive, the public form remains visible but no new registration can be submitted.

General Information

Field	Description
Title *	Name displayed on the public form
Date *	Date and time of the event
Location	Address or venue name
Capacity	Empty = unlimited. Counts all registered participants: paid, pending, free, and guests. When the maximum capacity is reached, the public form displays an error message and new registrations are automatically blocked.
Additional information	Description displayed on the public form
Image	Optional. JPG, PNG or WEBP — displayed at the top of the public form. Maximum size depends on the server PHP configuration.

Organizer Contact

This section is pre-filled with your organization's details as configured in Dolibarr. You can override them independently for each event.

Field	Description
Name	Name of the organizer or organization
Email	Contact email displayed on the public form
Phone	Contact phone number displayed on the public form
Address	Address displayed on the public form

 The organizer's name, email, phone, and address are visible to participants on the public registration form.

Registration Settings

Setting	Options
Allowed type	Individuals only / Companies only / Both
Number of participants	1 participant per registration or Multiple participants

Pricing

Setting	Description
Pricing type	Free or Paid
Unknown person (free)	Do not create anything / Create a prospect / Create a customer
Unknown person (paid)	Refuse registration / Create a prospect / Create a customer
Payment	Immediate (required) or Deferred (payment link sent after registration)
Payment bank account (paid)	Bank account used for invoices and payments related to the event. If left empty, Dolibarr's default bank account will be used.

 Payment KPIs are automatically hidden for free events.

 The VAT rate is calculated automatically by Dolibarr based on the tax configuration of the entity and third party. No specific setup is required in Registra.

Purchase Options

Purchase options let you offer additional services that participants can select at registration: gala dinner, accommodation, equipment kits, VIP access...

To add an option, click + ADD AN OPTION. Each option is configured with:

- A label (e.g. Gala dinner)
- A standard price (excl. VAT)
- An optional promo code and its discounted price (applies only to that option)
- A maximum quantity per event (0 = unlimited)
- Whether the option is required or optional
- An Active / Inactive status

 Active options appear in the Participants step of the public form. Each participant can select the options that apply to them. The total is recalculated in real time.

 A paid event must have at least one active purchase option or a price per participant greater than 0 in order to be saved.

Public Registration Link

Once saved, Registra automatically generates a unique public link for each event. This link can be:

- shared by email or on social media;
- embedded in a website;
- converted into a QR code for use at the reception desk.

 The public form is accessible without a Dolibarr account. Anyone with the link can register directly.

Additional Fields (Custom Questions)

Additional fields let you collect specific information from participants at registration (dietary requirements, special needs, how they heard about the event...).

To add a question, click + ADD A QUESTION. Each question is configured with:

- A question label
- An answer type: Short text, Long text, Dropdown list, or Checkboxes
- Whether it is required or optional

💡 Additional field responses can be exported from the event record using the "Export responses" button. The generated Excel file includes one column per configured question, in addition to the registration details.

4. Public Registration Form

4.1 Public Link

Each event generates a unique link, visible at the top of its admin record:

```
https://[votre-dolibarr]/custom/registra/public/inscription.php?event_id=XX
```

Share it by email, QR code, or embed it in a website. No Dolibarr account is required.

The form displays your organization's logo, event details (date, location, price), and the number of remaining spots if a capacity has been set.

4.2 The 4 or 5 Registration Steps

Step 1 — Identification

Depending on the registration type allowed for the event:

- Individual: first name, last name, email, phone, postcode, city
- Company: company name, registration number (SIREN/SIRET), email, phone, postcode, city + main contact

Registra automatically searches for an existing record in Dolibarr to prevent duplicates.

1

Identification

Enter your organisation information and the contact details.

If a matching record is found, you can select it to avoid re-entering information.

Search in the existing database

A record matching your search was found. Please confirm to continue.

Step 2 — Participants

For multi-participant events: add each participant with their first name, last name, position/role, and badge text.

If the event offers purchase options, each participant has their own option selection area. The total updates dynamically in real time based on the selected options and any promo code applied.

2

Participants

Add one or more participants, select the options you want and apply a promo code if you have one.

Entry x 1	€0.00
VAT workshop x 1	€10.00 €0.00
Lunch - 1 seat x 1	€150.00 €100.00
Total	€100.00

 Powered by PEREL

The Promotional Code section is displayed only when at least one promotional code is available for the event.

A global promotional code can be entered in this section and applied using the Apply Code button. It automatically activates the corresponding discounts on all eligible purchase options.

Step 3 — Additional Fields (if configured)

If custom questions have been configured for the event, a dedicated step is inserted here. The participant answers the questions before moving to the summary. If no questions are configured, this step is skipped automatically.

3

Additional fields

Answer the additional questions in the form.

Confirm registration

perel Powered by PEREL

Step 5 — Confirmation

Dolibarr automatically creates the invoice (paid event). Depending on the configuration:

- Immediate payment: a payment link is displayed on screen
- Deferred payment: instructions are provided to pay at a later date

5

Confirmation

Your registration has been recorded.

An invoice is automatically generated.

Depending on the event settings, a payment button may be offered so you can pay the invoice immediately.

5. Tracking and Dashboard

5.1 KPI Indicators

Indicator	Description
PARTICIPANTS	Total registered participants
PAID	Participants with a paid invoice (+ number of paid invoices)
PENDING	Participants with an outstanding invoice
INVOICED REVENUE	Total invoiced amount (all invoices combined)
COLLECTED REVENUE	Amount actually collected + amount still outstanding
GUESTS	Participants added manually from the administration, not invoiced
PRESENT	Participants marked as present + attendance rate

💡 The INVOICED REVENUE, COLLECTED REVENUE and PENDING indicators are automatically hidden for free events.

5.2 Adding a Guest

From the event administration page, guests can be added manually. They are assigned the “Guest” status: no invoice is generated and they are not included in pending payment statistics.

5.3 Closing an Event

Once the event is over and attendance has been recorded, uncheck the "Active / registrations open" box on the event record. This closes the public form: no new registrations will be accepted.

💡 Closing the event does not delete any data. Registrations, invoices, and statistics remain accessible and exportable.

5.4 Attendance Management

Attendance management is designed for use on the day of the event, at the reception desk. It lets you verify in real time:

- Whether the participant is registered
- Whether their payment has been received
- Their role or position (useful for badge distribution)

In the event record → Participants section, check the Present column for each participant as they arrive. Then click "Save attendance" to confirm.

Attendance can also be recorded after the fact, once the event is over, to feed the KPIs and generate complete statistics.

💡 Attendance data feeds directly into the dashboard KPIs (number present, attendance rate) and is included in the Participants export.

6. Excel Exports

6.1 Participants Export

Column	Content
Third party	Company name (legal entity) or blank (individual)
First name / Last name	Participant identity
Position / role	Position entered at registration
Badge text	Text to print on the badge
Purchased options	List of options selected by this participant
Registration type	Individual / Company / Guest
Invoice	Dolibarr invoice reference
Average cost per participant (€)	Price share allocated to this participant
Invoice amount (€)	Total invoice amount for the registration
Payment status	Paid / Pending / Free / Guest
Payment date	Settlement date if paid
Present	Yes / No

6.2 Question Responses Export

Column	Content
Invoice	Dolibarr reference
Registration date	Registration date and time
Third party	Name or company name
Third-party email	Contact email
Invoice amount (€)	Total invoiced
Main participant	First name + Last name
Total participants	Number of participants in the registration
+ Dynamic columns	One column per configured custom question

6.3 Labels / Badges Export

Excel file optimized for badge mail merge. Contains the following information for each participant: First Name, Last Name, Position/Role and Badge Text.

7. Frequently Asked Questions

Can an event with participants be deleted?

No. Deletion is blocked as soon as any participant is recorded, to prevent accidental loss of registrations and associated invoices.

Does the form work without a Dolibarr login?

Yes. Anyone with the link can register without a Dolibarr account. All operations are carried out behind the scenes by the `registra_system` user.

Will a participant already in Dolibarr be created as a duplicate?

No. Registra first searches for an existing record by email, phone, or name. If a match is found, the registration is linked to it.

Can multiple promotional codes be used?

Yes. Each promotional code is tied to a specific purchase option, so multiple discounts can be applied at the same time within a single registration.

What happens when a promotional code reduces the total amount to €0?

The registration is processed normally, but no invoice and no payment request are generated.

Can a company register multiple employees in one go?

Yes. A single registration can include multiple participants, each with their own options. A single invoice is generated for the entire registration.

Is VAT handled automatically?

Yes. Registra delegates all VAT calculation to Dolibarr. The rate applied to invoice lines is determined by the tax configuration of your entity and the relevant third party, with no specific setup required in Registra.

Is Registra compatible with multi-entity setups?

Yes. Registra respects the Dolibarr entity system. Events in one entity are not visible to others.

Does uninstalling the module delete existing data?

No. Uninstalling the module does not delete events, registrations, participants, invoices or statistics. All data remains stored in Dolibarr and is automatically available again if the module is reinstalled.

How can I permanently delete all Registra data?

Permanent data deletion is intentionally not performed during uninstallation to prevent accidental data loss. If you wish to remove all Registra data (events, registrations and statistics), please contact PEREL support for the SQL cleanup procedure corresponding to your version.

8. Glossary

Term	Definition
Participant	A person registered for an event, linked to a registration record
Guest	A participant added manually by an administrator, with no invoice generated
Registration	A record grouping one or more participants, linked to a Dolibarr third party and an invoice
Third party	A Dolibarr entity (individual or company) linked to the registration
Discounted price	New price that applies to an option when a promotional code is used
Promotional code	A code that activates a discounted price on a purchase option.
Purchase Option	An additional service that participants can select during registration
Purchase Option Promo Code	A code that activates a discounted price on a specific purchase option
Technical user	The registra_system account used by Registra to process public form operations
KPI	Key performance indicator displayed on the event dashboard.
